- * Full function URC for TV, VCR, SAT/CBL., CD, LD, CDI, with extensive library of IR codes.
- * Control of lights and appliances connected to X-10 modules in combination with Transceiver Module.
- * Simple plug-in module for the RS232 or PS2 port.

Applications

"Put your feet up": Are you tired of being tied to your PC by a mouse? We all like to put our feet up ... to think over ideas and work comfortably. The RF multimedia universal remote now makes it possible to work on your PC without being "tied up". The RF multimedia universal remote replaces the mouse with an easy-to-use thumb pad and numeric key pad, complete with shifted functions. Scrolling through your E-mail and surfing the internet take on a whole new dimension.

"Favorite applications with one button": With the provided software, you can pre-program the remote the launch directly up to 15 favorite applications. Great for quick access to information when you are on the telephone or just avoiding complicated launch sequences.

Your PC can be as easy to use as your electronic organizer. The Universal IR/RF mouse-remote control contains a library of codes to match most of the TV, VCR, cable and SAT components currently available. This lets you set up the remote to control most of your A/V products.

"Room-to-Room Control": With the RF feature, the remote can be used together with X-10's Gigavideo to allow A/V components such as a SAT to be controlled from any room in the home.

"X-10 Home Automation": The remote includes Home Automation when used in conjunction with the IH2060 - TM12 wireless transceiver module, allowing it to be used to switch and dim lighting in a home theater application for example. The Universal IR/RF mouse-remote control sends wireless RF signals to the TM12 transceiver, which then retransmits these signals over existing house wiring to control lights and appliances connected to X-10 modules.
