

SPEAKERLINK65

Listen to your favourite music anywhere in your home, without running extra wires!

FEATURES

- Connect extra speakers anywhere in your house - wirelessly!
- includes fancy remote for controlling all your audio/video equipment, through walls and ceilings
- universal remote control includes learn function
- uses the 2.4 Ghz frequency

USE & APPLICATIONS

This Wireless Audio transmitter Kit consists of a transmitter base unit which connects to the audio line)out jack on any audio source, a receiver unit with built-in speaker drivers to which you connect your own speakers*, and a remote control that lets you control the volume, balance, bass, treble, etc.

The *Audio transmitter* converts the audio signal from your CD player, stereo, PC sound card, etc. into a radio frequency (RF)signal and transmits it (even through walls)to the Audio Receiver unit.

The *Audio Receiver* converts the signal back to its original form, amplifies the signal, and passes it to your connected speakers.

The remote is also a Universal Remote so it can also control your TV, VCR, etc. It can even control lights and appliances around your home when used with **X10 Modules**.

Place the receiver and speakers on your patio for example, and listen to high quality audio outside while you're having a barbecue.

*You can use any speakers rated at 4 to 8 Ohms,and a minimum power rating of 10W.
