

MARMITEK PC CONTROL

Do you have a personal computer? Then you have a powerful audio/video centre at your disposal. Nowadays, every PC can:

- 1 Play DVDs
- 2 Play MP3 music
- 3 Display digital photographs
- 4 Receive internet radio
- 5 Display films that you have downloaded from the Internet or made yourself
- 6 Play CDs and receive title information via the Internet
- 7 Display, record and pause live TV images (TV card required)

Would you buy a TV or stereo without a remote control? Then why not have a remote control for your PC?

With the Marmitek PC Control you can not only take advantage of the audio & video options of your PC when you are in the same room, but throughout the entire house.

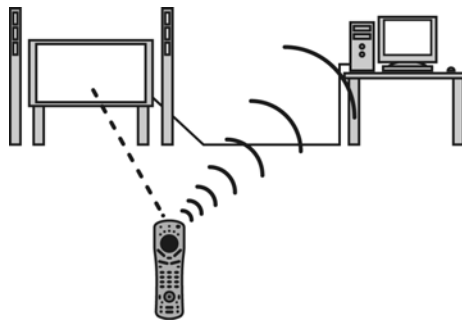

Application and functions:

a) the PC monitor is 'in sight' in the living room, study or bedroom

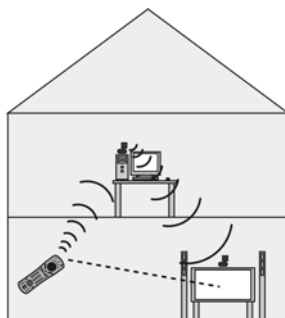

- 1 You can use the DVD player, CD player, MP3 music collection, (Internet) video files and TV card functions of your PC and access all the functions via one remote control, which works exactly the same as the remote for your TV.
- 2 Wide range wireless mouse control. Manual control of all your existing software, such as PowerPoint presentations, DIVX player, image manipulation software and Internet browser.
- 3 Enhanced view of search and play functions, so that you can read the screen from a distance.
- 4 Control your PC or laptop from your chair or from the bed!

b) the PC is directly connected to your TV and stereo system

- 1 You and your family can control the PC, as easy as controlling the TV or video recorder.
- 2 The *Showshifter* software provides clearly legible information at the right resolution for DVD, MP3, CD, (Internet) video and TV/video functions, which can be displayed on your TV screen.
- 3 When your PC has a TV tuner card, you can change channels and record programs. You can even pause a video! With 'TimeShift' you can continue watching the program from the point where you stopped it.
- 4 No need for optical contact with the PC because of the use of a HF transmitter. This makes it possible to store the PC out of sight. No noisy fans and coolers!

c) The PC as the central audio/video source for your TV and audio system elsewhere in the house

Combined with the Marmitek video transmitters (such as the PC to TV Sender, art. No. 09516, available separately) you can transmit the images and sound wirelessly from your PC to your TV and audio system anywhere in the house (to transmit images the PC has to have a TV-out connection).

- 1 Get more out of your PC: Take advantage of its many functions everywhere in the house.
- 2 No need to walk up and down the stairs to control your PC when using the audio/video options of the PC.
- 3 Ideal addition to any existing (wireless) connection between PC and TV.
- 4 Good range through walls and ceilings (up to 30m).
- 5 No need to carry the PC from room to room.

Showshifter

The PC Control comes with a basic version of the popular *ShowShifter* software to control the following MultiMedia functions remotely.

DVD Player

TV

MP3 Music player

Digital Video Recorder

CD Player

Pause TV (Time Shifting)

- 1 Specially designed for display on the TV screen and viewable on the PC monitor from a great distance.
- 2 Use the menu buttons on the remote control to select media functions and to start, pause, etc. the display.

The PC Control is a true Swiss Army knife: extremely versatile ...

- 1 The PC Control is also a universal IR remote control for up to 5 appliances, such as your TV, VCR, satellite receiver etc.
- 2 The Home Automation button (house) activates the Marmitek X-10 functions. You can control all lighting and electrical appliances with one remote control.

The PC Control consists of:

1. A remote control with IR and radio signal.
2. Radio frequency receiver with USB connection for Plug & Play installation.
3. *ShowShifter* software on CD.
